                  Biochem. Biophys. Res. Commun. 150:1275-1281(1988).
-!- FUNCTION: C-TERMINAL ALPHA-ANLIDATION OF BIOLOGICAL PEPTIDES.
-!- CATALYTIC ACTIVITY: PEPTIDYLGLYCINE + ASCORBATE + O(2) =
PEPTIDYL(2-HYDROXYGLYCINE) + DEHYDROASCORBATE + H(2)O.
(THE PRODUCT IS UNSTABLE AND DISMOTATES TO GLYOXYLATE AND THE
CORRESPONDING DESGLYCINE PEPTIDE AMIDE).
                                                                                                                                                                                                                                                                                                                                                   01-OCT-1989 (Rel. 12, Created)

AND ATCASE) (BY SIMILARITY).

CATALYTIC ACTIVITY: 2 ATP + GLUTAMINE + CO(2) + H(2)O = 2 ADP + CATALYTIC ACTIVITY: CARBAMOYL PHOSPHATE + GSPARTATE = CATALYTIC ACTIVITY: CARBAMOYL-PHOSPHATE + ASSARTATE = CATALYTIC ACTIVITY: CARBAMOYL-PHOSPHATE + ASSARTATE = CATALYTIC ACTIVITY: CARBAMOYL-PHOSPHATE + ASSARTATE = CATALANEOUS: GATASE (GLUTAMINE AMIDOTRANSFERASE) AND CPSASE (CARBAMOYL PHOSPHATE SYNTHASE) FORM TOGETHER THE (CARBAMOYL PHOSPHATE SYNTHASE) FORM TOGETHER THE GLUTAMINE-DEPENDENT CPSASE (GD-CPSASE) (EC 6.3.5.5).

CATALANEOUS: IN EUKARYOTES EC 6.3.5.5 IS SYNTHESIZED BY TWO PATHWAY-SPECIFIC (ARGININE AND PYRIMIDINE) UNDER SEPARATE CONTROL.

SIMILARITY: THE CPSASE DOMAIN IS SIMILAR TO OTHER CPASES.

SIMILARITY: THE GATASE DOMAIN BELONGS TO TYPE-1 GLUTAMINE AMIDOTRANSFERASES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This SWISS-PROT entry is copyright.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1187
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1171
                                                                                                                                                                                    "Cloning and cDNA sequence of a bowine submaxillary gland mucin-like protein containing two distinct domains.";

Proc. Natl. Acad. Sci. U.S.A. 87:6798-6802(1990).

-I- SUBCELIULAR LOCATION: SECRETED.

-I- TISSUE SPECIFICITY: SUBMAXILLARY MUCOSAE.

-I- SIMILARITY: TO PORCINE APOMUCIN.

-I- SIMILARITY: CONTAINS 1 C-TERMINAL CYSTINE KNOT-LIKE DOMAIN (CTCK).

"MOLECULAR cloning, functional characterization, and chromosomal localization of a human somatostatin receptor (somatostatin receptor type 5) with preferential affinity for somatostatin-28.";
Mol. Pharmacol. 45:417-427(1994).

-i- FUNCTION: RECEPTOR FOR SOMATOSTATIN-28. THE ACTIVITY OF THIS RECEPTOR IS MEDIATED BY G PROTEINS WHICH INHIBIT ADENYLYL CYCLASE RECEPTOR IS MEDIATED BY G PROTEIN EPROTEIN.

-i- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN.

-i- TISSUE SPECIFICITY: PROMINENT IN THE PITUITARY AND SMALL INTESTINE. LOW LEVELS IN ISLETS AND SPLEEN. NOT DETECTED IN KIDNEY, PANCREAS, CEREBELLUM, OR CORTEX.

-i- SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       01-JUL-1993 (Rel. 26, Created)

Biophys. Res. Commun. 169:551-558(1990).

-!- FUNCTION: C-TERMINAL ALPHA-AMIDATION OF PEPTIDES.
-!- CATALYTIC ACTIVITY: PEPTIDYIGLYCINE + ASCORBATE + 0(2) =
-!- PEPTIDYL(2-HYDROXYGLYCINE) + DEHYDROASCORBATE + H(2)O.

(THE PRODUCT IS UNSTABLE AND DISMUTATES TO GLYOXYLATE AND
CORRESPONDING DESGLYCINE PEPTIDE AMIDE).
-!- COFACTOR: COPPER, AND ASCORBATE.
-!- SUBCELLULAR LOCATION: SECRETORY GRANULES.
-!- SUBCELLULAR INCAMINGS TO THE COPPER TYPE II, ASCORBATE-DEPEN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             01-NOV-1990 (Rel. 16, Created)

FUNCTION: REGULATORY PHOTORECEPTOR WHICH EXISTS IN TWO FORMS THAT ARE REVERSIBLY INTERCONVERTIBLE BY LIGHT: THE PR FORM THAT ABSORBS MAXIMALLY IN THE RED REGION OF THE SPECTRUM AND THE PFR FORM THAT ABSORBS MAXIMALLY IN THE FAR PREGION. PHOTOCONVERSION OF PR IN ABSORBS MAXIMALLY IN THE FAR PREGION. PHOTOCONVERSION OF PR IN PER INDUCES AN ARRAY OF MORPHOGENIC RESPONSES, WHEREAS RECONVERSION OF PFR TO PR CANCELS THE INDUCTION OF THOSE RESPONSES. PFR CONTROLS THE EXPRESSION OF A NUMBER OF NUCLEAR GENES INCLUDING THOSE ENCODING THE SMALL SUBUNIT OF RIBULOSE-BISPHOSPHATE CARBOXYLASE, CHLOROPHYLL A/B BINDING PROTEIN, PROTOCHLOROPHYLLIDE REDUCTASE, RRNA, ETC. IT ALSO CONTROLS
